

### How the Fund Works

The aim of the Indexed 50/50 Equity Fund is to achieve average equity fund returns and eliminate manager selection risk, which is the risk of being with an investment manager who underperforms.

The assets of this fund are fully invested in equities. The allocation in this fund is split into approximately 50% Eurozone assets and approximately 50% assets from the rest of the world. The stock selection within each market is index stock selection, meaning that we replicate the weighting that each stock represents within the relevant market index.

### Investment Risk

This is a high risk fund which can have a high level of volatility. Therefore it may not be suitable for investors who have less than 10 years to retirement. The fund is most suitable for long term investment.

**Warning: The value of your investment may go down as well as up.**

### Country Distribution

### Performance

Period	Return	Benchmark
YTD	6.4%	6.8%
1 Year	-5.1% p.a.	-4.3% p.a.
3 Year	11.0% p.a.	11.9% p.a.

These returns are based on a standard annual management charge of 0.65%. Management charges may vary. **The return of this fund since launch (6th December 2007) is -4.2% p.a.**

**Warning: Past Performance is not a reliable guide to future performance.**

**Warning: This fund may be affected by changes in currency exchange rates.**

### Market Commentary

The positive sentiment and increased liquidity from central banks that have been driving asset prices since the start of the year waned in April. Many of the asset classes that had been outperforming gave back some gains, particularly European and Japanese equities, Spanish government bonds and commodities. The outlook for the US economy remains a support for equity markets, particularly US equities which are now outperforming global equity markets since the start of the year, despite the more demanding valuations levels than other regions are trading on.

**This fund may engage in securities lending to earn returns.**
